

Comprehensive Medication Management for Home Health Patients

Medication management plays an important role in the long-term health and safety of home health patients. Research shows:

26% of home health patients are **rehospitalized within 30 days**, resulting in lost revenue and decreased retention

Up to **64% of hospital readmissions** are **medication-related** and potentially preventable

Fall risk increases by 18% in patients taking **≥4 medications**; this increases to **50%** in patients taking **≥10 medications**

Regular **medication reviews** have been proven to reduce falls in elderly patients

Only **50%** of patients take their medications **as prescribed**

96% of patients take medications as prescribed when they are **packaged by dose date and time**

Focus on Your Patients, Not Their Meds

AdherePack™ by AdhereRx™ provides end-to-end medication management support including compliance packaging, med sync, HIPAA-compliant home delivery, and monthly medication reviews with our licensed telepharmacy team. Our licensed pharmacists help your care teams proactively identify drug therapy problems (DTPs) – like drug interactions or dosage issues – so they can care with confidence.

Seamless Care Transitions

Staff turnover and communication barriers can disrupt medication routines. Our pharmacists review claims data and coordinate across care teams to manage risk and improve care outcomes.

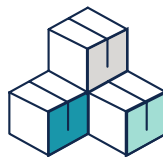

Improved Retention

Our partnership does more to ensure that your care teams are free to focus on creating lasting, meaningful patient relationships that improve experiences – and your bottom line.

24/7 Telepharmacy Support

Our licensed telepharmacy team conducts monthly medication reviews to proactively identify DTPs – like drug interactions or dosage issues – so your teams can care with confidence.

Proven Adherence Tools

Safe, accessible adherence tools combined with customization, convenience, and continuous engagement make it easy for your providers to deliver the right meds at the right time.
